

# Greensborough RSL

## Double Conic Europa Structure

The Greensborough RSL Club has a cantilevered raised deck located directly adjacent to their main dining area that they wanted to provide waterproof coverage over so it could be utilized for dining whilst enjoying the views overlooking the Plenty River and parkland surrounds.

A 10.4 metre x 3.8 metre double conic Europa structure on six perimeter posts was installed by Shade Living to cover the space.

Given the positioning and height of the area the engineering and installation of the structure (which bolted to the existing cantilevered deck) was quite a complex undertaking but has provided an excellent result for the client.

The provision of clear PVC blinds provides the versatility for the area to be utilized and an indoor / outdoor are both in summer and winter.

**Client:**  
Greensborough RSL

**Location:**  
Greensborough

**Date of Completion:**  
January 2013

**Product Type:**  
Double Conic Europa  
Structure
